MAIN INFORMATION

-
Global investment

USD \$ 10 million
Executed investment

-
Start of construction

-
Start of operations

-
Employment

Type of project

- New (greenfield)
- Enlargement (brownfield)
- Replacement (brownfield)
- Reutilization (greenfield)

Mineralization of epithermal veins of high-grade high grade intermediate sulfidation gold, silver and base metals (copper, molybdenum and others)
Type of deposit

In evaluation
Mineral reserves (ECCR standard)

In evaluation
Mineral resources (ECCR standard)

Open pit and underground
Type of mine

6 years with possibility of extension
Mine life cycle

50 ton/day
Estimated plant capacity

In evaluation
Estimated annual production

CURRENT STATUS OF THE PROJECT

Stage progress:

- Pre-feasibility
- Feasibility
- Detail engineering
- Construction

The feasibility analysis contemplates in pre-production a plant of up to 50 Ton/day. In the exploration stage, 9 epithermal type targets have been identified, finding alterations that indicate the presence of Au, Cu, Mo in porphyry.

Adherence to initiatives and best practices:

One of the objectives of CMO Colombia S.A.S., is the development of its activities with the best mining practices and the highest technical, safety and environmental standards, which allow a responsible exploitation with the communities, the environment and sustainable over time.

Environmental License (CAM)

- Requested
- Under consideration
- Approved

For the Environmental Impact Study, payment was made to the CAM (02/28/2022) with file No. 20223000053562 in accordance with the Request dated 01/13/2021 with file No. 20213000010152. Through ICANH Resolution No. 100 of June 2022, the Preventive Archaeology Program for the project was approved.

Main achievements in social management

An antenna was installed to provide cellular telephone service in the area.

A daycare center and an animal slaughter facility were built.

The NMA is in the process of approving the first formalization project that will serve as a pilot to integrate the traditional miners under title 20321.

Works and construction program - PTO (National Mining Agency)

- Submitted
- Under evaluation
- Approved

PTO approved by ANM for small mining in the target named Los Azules up to 350 Ton/day: AUTO PAR-I No. 0087 February 24, 2014. PTO under review for 5 more targets. File No. 20221001710362, 18/02/2022. Includes Social Management Plan (PGS).

Additional project data: *The project is 100% owned by CMO Colombia S.A.S. It's located in Central Cordillera, in the Jurassic magmatic belt and covers an area of 2,634 hectares, at elevations between 1,400 and 2,200 meters above sea level, indicating a vertical continuity greater than 500 meters. With a high probability of the presence of a deep telescoped porphyry system. The identified mineralized area has an extension of 6 km by 4 km, the preliminary exploratory works indicate the existence of at least 6 porphyry-type exploration targets. Geological work suggests that three of the targets may have more than 2 million Oz Au and potential in the other epithermal targets; In addition:*

- *The contract area is not subject to any environmental restrictions.*
- *There are no ethnic communities present in the contract area.*
